

**ISOCHRONISM**

The word Isochronism is of Greek derivation, meaning Equal Time. It designates one of the principles applied to a watch in its adjustment.

The Balance of a watch gives 18,000 vibrations every hour. Should it vary one vibration in every 20,000 it would exceed the limit placed by railway time inspection and would be rejected; hence the necessity of isochronism—equal time.

The South Bend Watch is designed mathematically correct, made of the best material possible to secure, assembled by men who have made this their life's occupation and its isochronal adjustment as near perfect as human skill can accomplish.

We surely endorse the action that the good people of Humboldt are taking toward helping far away China, one of the most ignorant nations of people on earth, that are now asking for help from an honest heart. But we are not surprised at the action taken in Humboldt for some of the best people on earth live in this progressive city.
